Dear Morpho Team,

I am writing to express my strong interest in contributing to Morpho. Currently working as a Python Developer in Switzerland, I combine practical engineering skills with a strong academic background in Mathematics.

My goal is to specialize in quantitative development for DeFi protocols. To achieve this, I am currently pursuing a Mathematics degree and have completed a specialized diploma in DeFi architecture (Alyra). I will also be joining the upcoming DeFi course at EPFL (École Polytechnique Fédérale de Lausanne).

I am impressed by Morpho's efficiency and approach to lending markets. I would love to bring my expertise to your team as a Working Student or Part-time Developer (2 days/week).

Are you open to discussing how my profile could fit your current engineering needs?

Best regards,

Leo Botelho
